## Education

**Morgan State University**, Baltimore, MD

Fall 2024 – Spring 2027

Major: Bachelor of Science, Computer Science

- Achieved 4.0 GPA through rigorous coursework in data structures, machine learning, and AI systems

**Hogeschool Gent (HO Gent)**, Belgium

Fall 2023 – Fall 2024

Major: Bachelor of Science, Computer Science

- Maintained perfect 4.0 GPA

## Research & Work Experience

**Artificial Intelligence Research Assistant**

Apr 2025 – Present

Morgan State University - CEAMLS Research Lab

- Built disaster-aware UAV navigation system by implementing PPO reinforcement learning agents and computer vision classifiers, achieving 95% accuracy in hazard detection and enabling autonomous path planning through disaster zones
- Developed real-time aerial hazard detection by training EfficientNet-B0 classifiers on disaster imagery datasets, reducing false positive rates by 40% and enabling UAVs to navigate safely through complex disaster environments
- Created an autonomous UAV navigation framework by integrating OpenAI Gym with PyTorch PPO, delivering 30ms end-to-end action latency ( $\approx 33$  Hz) — about  $3\times$  faster than our scripted baseline, enabling real-time decisions in emergency-response scenarios

**Artificial Intelligence Research Assistant**

Mar 2025 – May 2025

Morgan State University - CEAMLS Research Lab (TUIS)

- Identified critical security vulnerabilities in automated mobility systems by deploying machine learning computing infrastructure and analyzing attack patterns, discovering 15+ high-risk security flaws that could compromise autonomous vehicle safety
- Developed comprehensive threat assessment framework by implementing ML-based anomaly detection algorithms and penetration testing methodologies, enabling proactive identification of zero-day vulnerabilities in connected vehicle networks

**ML Engineer Intern**

Jul 2024 – Aug 2024

Apple Inc, Brussels, Belgium

- Enhanced Siri's query processing capabilities by developing and fine-tuning transformer-based ML models for intent classification, resulting in 25% improvement in understanding complex and ambiguous user requests
- Optimized natural language processing algorithms by implementing advanced model architectures and attention mechanisms, making Siri 40% more responsive to user goals and reducing response latency by 30%

**Lead Student Researcher**

Jan 2024 – May 2024

Hogeschool Gent (HO Gent), Computer Science Department

- Led the CDMN project by building ML pipelines and decision visualizations in Python/Flask and Vue.js, which improved classification accuracy and made model rationale auditable for faculty reviewers
- Shipped an end-to-end decision support platform by integrating TensorFlow, Scikit-learn, and the OpenAI API, which cut experiment turnaround time and enabled repeatable analysis across datasets

**Full-Stack Software Engineer**

Nov 2022 – Jan 2024

Hyp3 Music Enterprise, Lagos, Nigeria

- Led build of a cross-platform music distribution platform by owning web, mobile, and backend delivery, enabling expansion into publishing, marketing, and partnerships
- Improved release operations by automating content ingestion, royalty reporting, and analytics, reducing manual work and speeding artist onboarding

**Cloud Engineer Intern**

May 2023 – August 2023

Microsoft, Brussels, Belgium

- Optimized cloud infrastructure scalability by automating deployment pipelines and implementing Azure services, improving resource allocation efficiency for enterprise-level applications

- Designed scalable cloud solutions through hands-on system architecture, enhancing performance and operational reliability across multiple deployment environments

### Coding Instructor

Jan 2022 – Mar 2023

*Code Fever*, Dendermonde, Belgium

- Assisted in teaching Python and JavaScript to 800+ children aged 8-15 through project-based learning methodology, helping students develop problem-solving skills and unlock their "IT superpowers"

### Software Engineer

Jan 2021 – Jun 2023

*Go! Talent*, Dendermonde, Belgium

- Built staff-absence and device-inventory systems by designing lightweight web apps and automations, which replaced spreadsheets and gave school admins real-time dashboards
- Kept operations smooth across campuses by maintaining the tools and shipping small integrations (alerts, CSV imports, SSO), which reduced manual follow-ups and support tickets

## Projects

---

**Retrak** - Built automated job hunting platform using Next.js, Python, Flask, Docker, and OpenAI, achieving 226 active users and 114 paying customers within first two months through AI-powered resume customization and application automation.

**learn.ai** - Built a personalized learning platform (Next.js, Node.js, Python) by leveraging OpenAI and HuggingFace to generate conversational, multilingual skill roadmaps with ReactFlow visualization and voice input, earning a 14.8 average judge score and strong usability feedback.

**Aqua** - Contributed to a DeFi strategy platform by designing LangChain/LangGraph agent pipelines with Pinecone-based retrieval, enabling real-time autonomous market analysis and improving risk-adjusted yield through data-driven rebalancing.

**Seleve** - Built an enterprise talent intelligence platform (Next.js, Node.js, Python, MongoDB) by implementing AI retrieval and ranking for skill-matching, reducing manual screening time by 70%; in private beta with 6 paying companies across the UK, Australia, and Nigeria (\$500/month each).

**Fathom** - Built a Voice-first AI expert for code comprehension (Next.js, Python, LangChain) that enables developers to onboard and ramp faster by running multiple based agents in parallel for codebase understanding, multilingual voice queries, and visual mapping with ReactFlow.

## Leadership & Awards

---

### Founder, Code Space

2021 – Present

*Lagos, Nigeria*

- Founded a non-profit tech community by creating opportunities for young Black builders, growing to 10,000+ members and organizing West Africa's largest annual hackathon with 1,000+ attendees

**Recent Awards:** 2nd Place OpenAi Startup Hackathon, 1st Place JPMorgan Data for Good Hackathon, 1st Place Google Hackathon (AI Track), 3rd Place Howard University BisonBytes (AI Track)

## Technical Skills

---

**Languages:** Python, Java, TypeScript, JavaScript, C++, Rust

**Frameworks:** React, Next.js, Vue.js, React Native, Flask, Node.js, FastAPI

**ML/AI:** TensorFlow, PyTorch, Scikit-learn, OpenAI API, LangChain, Hugging Face

**Cloud/Database:** Azure, GCP, MongoDB, PostgreSQL, Docker, Git

## Relevant Coursework

---

Data Structures and Algorithms, Intro to Machine Learning, Object Oriented Programming, Discrete Structures, Linear Algebra, Operating System, Theory of Computation, Robotic Navigation.
